DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “means for locating a quantity of ground coffee adjacent a base of the cylinder” (claim 1) and the subject matter of claim 11 (i.e. a standard pot) must be shown or the features canceled from the claims. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 1761

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the one-way valve mechanism must be disclosed in the specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Colla (CH 298831) in view of Gaggia (GB 728,476) or Eugster (US 6,711,988). The patent to Colla discloses the claimed subject matter except for a one-way valve mechanism. The references to Gaggia and Eugster disclose that it is known in the art to have provided espresso machines with one-way valve mechanisms (19, 7), respectively. Thus, it would have been obvious to one having ordinary skill in the art at the time the invention

Art Unit: 1761

was made to have provided the device of Colla with one-way valve mechanisms in the manner suggested by either one of Gaggia or Eugster for enabling water to pass from above to below the head of the piston, if desired.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Eugster (US 6,711,988). The patent to Eugster clearly discloses an apparatus for making espresso coffee comprising a support frame (13), a vertically mounted open-topped cylinder (1) mounted on the support frame, the frame and the cylinder defining a space below the cylinder adapted to receive a block of compressed ground coffee (6) and below which a cup to receive coffee may be inserted, a piston (2) adapted to fit in the cylinder, and an actuation mean (14) linked to the piston enabling the piston to be moved up and down in the cylinder by the actuation means, wherein associated with the piston is a one-way valve mechanism (either 3 or 7) for enabling water to pass from

Art Unit: 1761

above to below a head of the piston. Thus, the features of the instantly rejected claims are structurally met by the reference.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new grounds of rejection.
